

## Ruby - Bug #11045

### ruby/test\_m17n\_comb.rb test\_str\_crypt tests platform-specific crypt behavior

04/07/2015 08:36 PM - headius (Charles Nutter)

<b>Status:</b>	Closed	<b>Backport:</b> 2.0.0: DONTNEED, 2.1: DONTNEED, 2.2: DONE
<b>Priority:</b>	Normal	
<b>Assignee:</b>	headius (Charles Nutter)	
<b>Target version:</b>		
<b>ruby -v:</b>	trunk	
<b>Description</b>		
I think we should just remove the glibc version guards in test_str_crypt in test/ruby/test_m17n_comb.rb.		
<div>1. JRuby can't determine glibc version without making a glibc-specific call (because we have no build-time configure script or similar)</div> <div>2. On platforms that use glibc but don't report version, this guard won't work.</div> <div>3. Do we really want to be testing linux-specific crypt behavior?</div>		
I propose that we just make the test skip non-alpha salt unconditionally.

I don't think we want, it's just an implementation regression test.

I propose that we just make the test skip non-alpha salt unconditionally.

Or we need a standard way to isolate this kind of tests.

That's not a bad idea, actually. I will split the Linux-specific regression part into a separate test. JRuby uses excludes to mask tests, so that will allow

us to exclude the platform-specific one.
