

Ruby - Feature #13924

Add headings/hints to RubyVM::InstructionSequence#disasm

09/20/2017 01:39 PM - tonytonyjan (Weihang Jian)

Status:	Open	
Priority:	Normal	
Assignee:		
Target version:		
<div>Description</div> <p>As the official document mentions, this method will return a String with the human readable instructions. However, it is quite hard to read since we can not understand the definition of each column, for example:</p> <pre>puts RubyVM::InstructionSequence.compile("[4, 5].max").disasm == disasm: #<ISeq:<compiled>@<compiled>>===== 0000 trace 1 (1) 0002 duparray [4, 5] 0004 opt_send_without_block <callinfo!mid:max, argc:0, ARGS_SIMPLE>, <callcache> 0007 leave</pre> <p>There is no clue can inform us that "(1)" stands for the line number, is it possible to either improve documentation or add some hints to the output string?</p>
