

Ruby - Bug #14822

[POP3/SSL] net/protocol.rb:44: warning: verify_hostname requires hostname to be set

06/04/2018 04:24 PM - hkamphor (Jos Kamphorst)

Status:	Closed	
Priority:	Normal	
Assignee:		
Target version:		
ruby -v:		Backport: 2.3: UNKNOWN, 2.4: UNKNOWN, 2.5: UNKNOWN
Description When enabling SSL with POP3 like this: <pre>require 'net/pop'</pre> <pre>Net::POP.enable_ssl Net::POP3.start(...) pop ...</pre> A warning like this will be generated: net/protocol.rb:44: warning: verify_hostname requires hostname to be set This happens because SSLContext default is :verify_hostname => true. The attached patch fixes this by setting the SSLSocket#hostname variable to the address which is given during Net::POP3.start.

I can reproduce this issue, and have confirmed your fix removes the warning. It would have been helpful to mention that this warning is only printed in verbose mode. :)

#2 - 06/20/2019 05:28 PM - jeremyevans (Jeremy Evans)

- Status changed from Open to Closed
