Ruby - Misc #19142

Run test suites against 'install', based on ENV variable?

Description

Some time ago I believe there was discussion about:

```
make
make test
make install
```

vs

```
make
make install
make test
```

Some people preferred to not have to run install before test (disk space, time, etc).

Might an environment variable like RUBY_TEST_FROM_INSTALL or RUBY_TEST_FROM_PATH be
added that would trigger the test suite to test against the Ruby install folder or the
Ruby in PATH?

I believe a handful of files in the test system would need changes, as they load files
using require_relative...

I think spec/mspec is already setup to do so.

I think that test needs install only when "preloadenv" and --enable-load-relative can't work.
At least test-all can run as /install/bin/ruby test/runner.rb, I think.
