Revision be7e5f1f85685a757bea6c8dae4e30914a5eec67 - 12/23/2024 02:52 AM - jmarrec (Julien Marrec)

Implements [Feature #3456]: Support pkgconf on windows

1. Store the PKG_CONFIG variable in Makefile.sub (or try to get it from the ENV var PKG_CONFIG in mkmf.rb)
2. Try to use --msvc-syntax, with a fallback to replacing -Lxxx with -libpath:xxx. --msvc-syntax has been in pkgconf since 1.4.0 (released 7 years ago). pkg-config (freedesktop), does not support it, hence the fallback.
3. The try_ldflags passes these ldflags as the opt parameter to the link_command, not as ldflags. Unix systems are forgiving in that regard, MSVC is not: as a result as passing them as opt, they (specifically the /libpath:xxx ones) end up passed before the -link command to cl.exe and it throws because it ignores it and therefore can't find the lib.

cl : Command line warning D9002 : ignoring unknown option '-libpath:C:/Users/julien/.conan2/p/libff3726d89a6255c/p/lib'
