Ruby - Bug #3833

"foo+bar".gsub("+","\\+") == "foobar" ?

09/16/2010 04:42 AM - grant (Grant Olson)

Status:	Rejected		
Priority:	Normal		
Assignee:			
Target version:			
ruby -v:	tryruby.org (I'm running 1.8.7 locally, same problem)	**Backport:**	

Description

=begin
The following gsub with a minus seems to work correctly:

▯▯>> "foo-bar".gsub("-","\-")
=> "foo\-bar"

But with a plus, it seems to run incorrectly by stripping the plus:
▯

        "foo+bar".gsub("+","\+")
        => "foobar"
        =end

History
