

Ruby - Bug #5354

Module#remove_const documentation is confusing

09/23/2011 07:57 AM - agrimm (Andrew Grimm)

Status:	Closed	Backport:
Priority:	Normal	
Assignee:		
Target version:		
ruby -v:	ruby 1.9.1p378 (2010-01-10 revision 26273) [i386-mingw32]	
Description		
<pre>=begin</pre> The documentation for Module#remove_const says: Removes the definition of the given constant, returning that constant's value. Predefined classes and singleton objects (such as true) cannot be removed. Based on this documentation, someone said in http://stackoverflow.com/q/7513727/38765 that you can't do remove_const on the File constant, whereas you can. <pre>class Object remove_const :File end</pre> File # => NameError: uninitialized constant File <pre>=end</pre>
