

Ruby - Bug #5357

Indentation of nested operators should nest

09/23/2011 07:02 PM - now (Nikolai Weibull)

Status:	Closed	Backport: 2.3: UNKNOWN, 2.4: UNKNOWN, 2.5: UNKNOWN
Priority:	Normal	
Assignee:	nobu (Nobuyoshi Nakada)	
Target version:		
ruby -v:	trunk	
Description		
Hi!		
Currently,		
<pre>return if hash. values_at(:a, :b, :c). reject{ e e.nil? or e.empty? }. empty?</pre>		
is indented		
as		
<pre>return if hash. values_at(:a, :b, :c). reject{ e e.nil? or e.empty? }. empty?</pre>		
I would prefer it to be indented as in the first example.

Your first example seems inconsistent, why are the last 3 lines indented at the same column?
It would be:

```
return if
  hash.
    values_at(:a, :b, :c).
      reject{ |e| e.nil? or e.empty? }.
        empty?
```

But it doesn't look nice to me.

Your first example seems inconsistent, why are the last 3 lines indented at the same column?
It would be:

```
return if
  hash.
    values_at(:a, :b, :c).
      reject{ |e| e.nil? or e.empty? }.
        empty?
```

But it doesn't look nice to me.

Indenting the last 3 lines highlights that the method chain is hanging off hash. I do this myself.

ruby-mode.el was dropped in [f03e68edb80dca962290d1fb3a6d49dabdbb911e](https://github.com/ruby-mode/ruby-mode/commit/f03e68edb80dca962290d1fb3a6d49dabdbb911e).

#7 - 08/01/2019 08:48 AM - nobu (Nobuyoshi Nakada)

- Description updated

The ruby-mode.el in Emacs 26 seems to indent as the first example.
