#12 - 12/04/2012 02:00 PM - nobu (Nobuyoshi Nakada)

- Assignee changed from mrkn (Kenta Murata) to drbrain (Eric Hoden)

rubygems.org上RubyGemsのバージョンを確認する

I think the culprit is rubygems, which doesn't separate build, source and install directories.

#13 - 12/06/2012 01:28 PM - drbrain (Eric Hodel)

=begin

This seems fixed in ruby 2.0.0 preview2 which includes RubyGems 2.0.0.preview2 and default gems:

```
$ gem20 pristine bigdecimal
Restoring gems to pristine condition...
Skipped bigdecimal-1.1.0, it is a default gem
$ gem20 env
RubyGems Environment:
- RUBYGEMS VERSION: 2.0.0.preview2
- RUBY VERSION: 2.0.0 (2012-12-05 patchlevel -1) [x86_64-darwin12.2.0]
- INSTALLATION DIRECTORY: /usr/local/lib/ruby/gems/2.0.0
- RUBY EXECUTABLE: /usr/local/bin/ruby20
- EXECUTABLE DIRECTORY: /usr/local/bin
- RUBYGEMS PLATFORMS:
- ruby
- x86_64-darwin-12
- GEM PATHS:
- /usr/local/lib/ruby/gems/2.0.0
- /Users/drbrain/.gem/ruby/2.0.0
- GEM CONFIGURATION:
- :update_sources => true
- :verbose => true
- :backtrace => false
- :bulk_threshold => 1000
- :benchmark => false
- "gemcutter_key" => ****
- "install" => "--format-executable --no-user-install"
- "update" => "--format-executable --no-user-install"
- "uninstall" => "--format-executable --no-user-install"
- REMOTE SOURCES:
- http://rubygems.org/
```

=end

#14 - 12/08/2012 04:56 PM - hsbt (Hiroshi SHIBATA)

latest rubygems fixed this issue. I confirmed to solve gem pristine bigdecimal.

But gem install bigdecimal always failed now. I think that bigdecimal problems at first. but nobu said it's rubygems defects.

#15 - 12/15/2012 06:47 AM - drbrain (Eric Hodel)

=begin

I think I understand the comments on this bug thanks to google translate but please inform me of anything important I did not address.

Using recent ruby and rubygems:

```
$ gem20 env
RubyGems Environment:
- RUBYGEMS VERSION: 2.0.0.preview2.1
- RUBY VERSION: 2.0.0 (2012-12-15 patchlevel -1) [x86_64-darwin12.2.1]
- INSTALLATION DIRECTORY: /usr/local/lib/ruby/gems/2.0.0
- RUBY EXECUTABLE: /usr/local/bin/ruby20
- EXECUTABLE DIRECTORY: /usr/local/bin
- RUBYGEMS PLATFORMS:
- ruby
- x86_64-darwin-12
- GEM PATHS:
- /usr/local/lib/ruby/gems/2.0.0
- /Users/drbrain/.gem/ruby/2.0.0
- GEM CONFIGURATION:
- :update_sources => true
- :verbose => true
- :backtrace => false
- :bulk_threshold => 1000
- :benchmark => false
- "gemcutter_key" => ****
- "install" => "--format-executable --no-user-install"
- "update" => "--format-executable --no-user-install"
```

```
- "uninstall" => "--format-executable --no-user-install"
- REMOTE SOURCES:
- http://rubygems.org/
```

I can pristine big decimal (like hsbt):

```
$ gem20 pristine bigdecimal
Restoring gems to pristine condition...
Skipped bigdecimal-1.1.0, it is a default gem
```

and ((%gem pristine --all%)) works:

```
$ sudo gem20 pristine --all
Password:
Restoring gems to pristine condition...
[...]
Skipped bigdecimal-1.1.0, it is a default gem
[...]
```

I can install bigdecimal:

```
$ gem20 install bigdecimal
Building native extensions. This could take a while...
Successfully installed bigdecimal-1.1.0
Parsing documentation for bigdecimal-1.1.0
Done installing documentation for bigdecimal (1 sec).
1 gem installed
```

The installed version of bigdecimal and the default gem version are the same, so the installed version can't be used:

```
$ ruby20 -rbigdecimal -e 'p $(".grep(/bigdecimal/)'
[/usr/local/lib/ruby/2.0.0/x86_64-darwin12.2.1/bigdecimal.bundle"]'
```

I don't know if this is a bug in RubyGems or not. kou, can you comment?

You also can't uninstall the duplicate version you installed, this is a bug:

```
$ gem20 uninstall bigdecimal
ERROR: While executing gem ... (Gem::InstallError)
gem "bigdecimal" cannot be uninstalled because it is a default gem
```

I will fix this bug ^

NOTE: RubyGems will build bigdecimal.so then install bigdecimal.so and ext/bigdecimal/lib/ into lib/. RubyGems edits the Makefile so ((%make install%)) will copy the files:

<https://github.com/rubygems/rubygems/blob/master/lib/rubygems/ext/builder.rb#L19-L23>

So source/build directories and lib directories can be separate (but not source, build and lib).

=end

#16 - 12/18/2012 12:40 AM - mrkn (Kenta Murata)

- Status changed from Assigned to Feedback

I think we need more precise information to reproduce the issue that gem install bigdecimal is still failed on trunk.

#17 - 12/18/2012 11:40 PM - kou (Kouhei Sutou)

The installed version of bigdecimal and the default gem version are the same, so the installed version can't be used:

```
$ ruby20 -rbigdecimal -e 'p $(".grep(/bigdecimal/)'
[/usr/local/lib/ruby/2.0.0/x86_64-darwin12.2.1/bigdecimal.bundle"]'
```

I don't know if this is a bug in RubyGems or not. kou, can you comment?

Umm... It is difficult... OK. It's a bug in RubyGems. We can fix it by the following change:

Index: specification.rb

```
--- specification.rb (revision 38448)
+++ specification.rb (working copy)
@@ -648,10 +648,10 @@
unless defined?(@@all) && @@all then
    specs = {}
    • [REDACTED]
    • [REDACTED]
        specs[spec.full_name] ||= spec
    end
    • [REDACTED]
    • [REDACTED]
        specs[spec.full_name] ||= spec
    end
```

I think we need more precise information to reproduce the issue that gem install bigdecimal is still failed on trunk.

I think that install command on Mac OS X doesn't report error for the same source and destination file. Could you try the following commands?

```
% touch a
% install a a
% echo $?
```

Here is the result on my Debian GNU/Linux:

```
% touch a
% install a a
install: 'a' and 'a' are the same file
% echo $?
1
```

I think that install on Mac OS X returns 0 for "echo \$?".

#18 - 12/19/2012 01:26 AM - mrkn (Kenta Murata)

Could you try the following commands?

This is my result:

```
$ touch a
$ install a a
install: a and a are the same file
$ echo $?
64
$ which install
/usr/bin/install
$ uname -a
Darwin mrkn-mbp15.local 12.2.0 Darwin Kernel Version 12.2.0: Sat Aug 25 00:48:52 PDT 2012; root:xnu-2050.18.24~1/RELEASE_X86_64 x86_64
```

#19 - 12/19/2012 01:03 PM - hsbt (Hiroshi SHIBATA)

I used GNU install(includes coreutils) in Mac OS. my result is same as kou's result of GNU/Linux.

#20 - 12/19/2012 01:09 PM - kou (Kouhei Sutou)

Thanks.

It seems that the following commands show a difference:

```
% touch a
% install a .
% echo $?
```

"\$?" is 1 on my Debian GNU/Linux. "\$?" will be 0 with Mac OS X's native install.
