

Ruby - Bug #7700

Assignment to an Constant does not give an singleton_class its name

01/15/2013 03:56 PM - Hanmac (Hans Mackowiak)

Status:	Rejected	Backport:
Priority:	Normal	
Assignee:		
Target version:		
ruby -v:	ruby 1.9.3p194 (2012-04-20 revision 35410) [x86_64-linux]	
Description		
object = Object.new		
ABC = object.singleton_class		
class ABC		
module D		
end		
end		
class << object		
module E		
end		
end		
p ABC #=> #<Class:#Object:0x00000001957c88>		
p ABC::D #=> ABC::D		
p ABC::E #=> ABC::E		
as you guys can see, and module into an singleton class get its right name, but the singleton_class itself does not get its name		

History

- Status changed from Open to Rejected

It's an intended behavior.

`ABC.name' gives "ABC" instead.
