I can not answer the question, but I believe this should be filed at "Feature" rather than "Bug". Normally the ruby core team enables functionality if it can be for several Operating Systems, e. g. not solely confined to but a single one. I am just mentioning this; I do not know if this is the case for recvmsg or not.

- Tracker changed from Bug to Feature

- Description updated

- Backport deleted (2.3: UNKNOWN, 2.4: UNKNOWN)

Is it possible to implement recvmsg using other (popular) system calls?
