

Ruby - Misc #15617

Any chance we can ship 2.5.4 sooner rather than later?

Description		
We started carrying code like this in Discourse due to #14634 breaking Queue after fork. https://review.discourse.org/t/dev-disable-async-logging-in-development-on-broken-ruby/1829 I was wondering if there is any chance we can fast track a 2.5.4 release? This issue is quite severe cause there are quite a few forking web servers out there (puma and unicorn) so the failure mode is common in the wild. #14634 is already backported

I guess this may be up to the release manager; perhaps he is a little bit busy right now. You could consider adding it to the next upcoming developer meeting (<https://bugs.ruby-lang.org/issues/15614>) to get feedback whether there may be any other difficulties (or to distinguish whether your issue was not yet noticed, which I guess may also happen every now and then, holidays, busy weeks and so forth).

We are also interested in seeing 2.5.4 released quickly, to get the [#14561](#) backport.

I'm sorry the link in previous post was for Japanese.

English version is here.
