

Ruby - Bug #4812

tool/rbinstall.rb does not work with rubygems 1.8.5

06/01/2011 03:35 PM - sakuro (Sakuro OZAWA)

Status:	Closed	Backport:
Priority:	Normal	
Assignee:	zenspider (Ryan Davis)	
Target version:		
ruby -v:	ruby 1.9.3dev (2011-06-01 trunk 31888) [i386-darwin9.8.0]	
Description		
<pre>=begin</pre> <p>Now rubygems 1.8.5 is merged into the trunk. But tool/rbinstall.rb depends on the fact that DIRECTORIES = %w[cache doc gems specifications] unless defined?(DIRECTORIES) line exist in lib/rubygems.rb, which did exist in rubygems 1.6.2 but gone in 1.8.5.</p> <p>The attached patch is not the best but simply a workaround which copies the subdirecotry list from old lib/rubygems.rb.</p> <pre>=end</pre>
