| Description | | |
| <p>3 of the drb tests leave the hostname part of the druby URI empty instead of using localhost. When a hostname is not provided, ruby uses the system hostname, which usually resolves to a local IP address, but not always. This causes the tests to fail if the system hostname doesn't resolve to a local IP address. The tests also appear to hang, since the connection timeout is 100 seconds.</p> <p>The attached patch fixes this case by using localhost as the hostname in the 3 tests that did not already do that, making them consistent with the other tests.</p> | | |

History

#1 - 03/11/2012 04:42 PM - ko1 (Koichi Sasada)

- Assignee set to seki (Masatoshi Seki)

#2 - 03/18/2012 06:46 PM - shyouhei (Shyouhei Urabe)
